

**Not all Reconditioned ATMs are created equal!**

## The NuSource Difference

**All NuSource remanufactured ATMs come with these standard features:**

o PCI compliant, incorporating the NCR Encrypted Pin Pad which supports Triple DES encryption in a secure module.

o ADA compliant hardware, incorporating Speech Output with Enhanced Private Audio, Tactilely discernible input controls, 12 key numeric Pin Pad, visually contrasting function keys, compatible Display Screen, and Braille Instructions.

o EMV® is a global standard for credit and debit payment cards based on chip card technology. NCR ATMs with IMCRW Card Readers are compliant. Dip Reader Options.

o Windows XP Pro Compatible with a minimum of a PIII, 1GHZ processor and 512MB of RAM. Compatible with NCR APTRA Advance NDC+ and APTRA Edge Software.

o Color LCD Displays with Sunlight Readable Color on all exterior models.

## Not all remanufactured ATMs are created equal!

### So what's different about a NuSource remanufactured ATM?

- o NuSource ATMs are completely disassembled, cleaned, repainted inside and out, and rebuilt as new. Many ATMs offered by other organizations are just cleaned and touched up as necessary to be resold.
- o Hardware, wiring harness, and brackets are tested, refurbished, and or replace to ensure they meet original manufacturer specifications.
- o Exterior fascia is reconditioned and/or replaced as necessary, back to original manufacturer specifications.
- o USB cards are added to all SCSI based ATMs so that EJ files can be downloaded to flash drives vs. old flex media. No more flex drives!

### ADA Compliance March 15, 2012

With recent ADA ATM standard changes, whether due to the cost of a new machine, transaction volume, or other budgetary concerns, many banks and credit unions are looking to refurbished ATMs to fulfill their replacement needs.
